INTRODUCTION

Pre-pregnancy care (PPC) recruitment which includes registration and intervention of obese women (BMI $\geq 27.5 \text{ kg/m}^2$) is crucial to reduce complications towards the mother and child during pregnancy.

1. SELECTION OF OPPORTUNITY FOR IMPROVEMENT

1.1 REASON OF CHOOSING

| No | Problem | S | M | A | R | T | Total |
|----|---|----|----|----|----|----|-------|
| 1 | Inadequate recruitment of obese postnatal mothers for pre pregnancy care in Barat Daya District | 24 | 20 | 19 | 20 | 19 | 102 |
| 2 | Increasing unsatisfactory pap smear result in Barat Daya District | 19 | 16 | 17 | 15 | 15 | 82 |
| 3 | Low rate of code 1 contraception in Barat Daya District | 19 | 17 | 16 | 13 | 15 | 80 |
| 4 | Low rate of sputum AFB screening in Barat Daya District | 17 | 13 | 15 | 14 | 16 | 75 |
| 5 | Poor enrollment into quit smoking clinic in Barat Daya District | 17 | 15 | 14 | 16 | 12 | 74 |

Scale: 1 – low, 2 – medium, 3 – high / Group Members : 8

S Verification data showed that 33.1% of obese postnatal mothers in Barat Daya District were registered in the PPC registry, but none of the registered mothers were recruited to receive appropriate interventions for PPC

M Data can be monitored and collected from Antenatal Care book

A Obese postnatal mothers able to be identified for further intervention prior to next conception

R Generate a uniformed work flow and system for Pre-pregnancy care among obese postnatal mothers

T Can be completed within the time frame

1.2 LITERATURE REVIEW

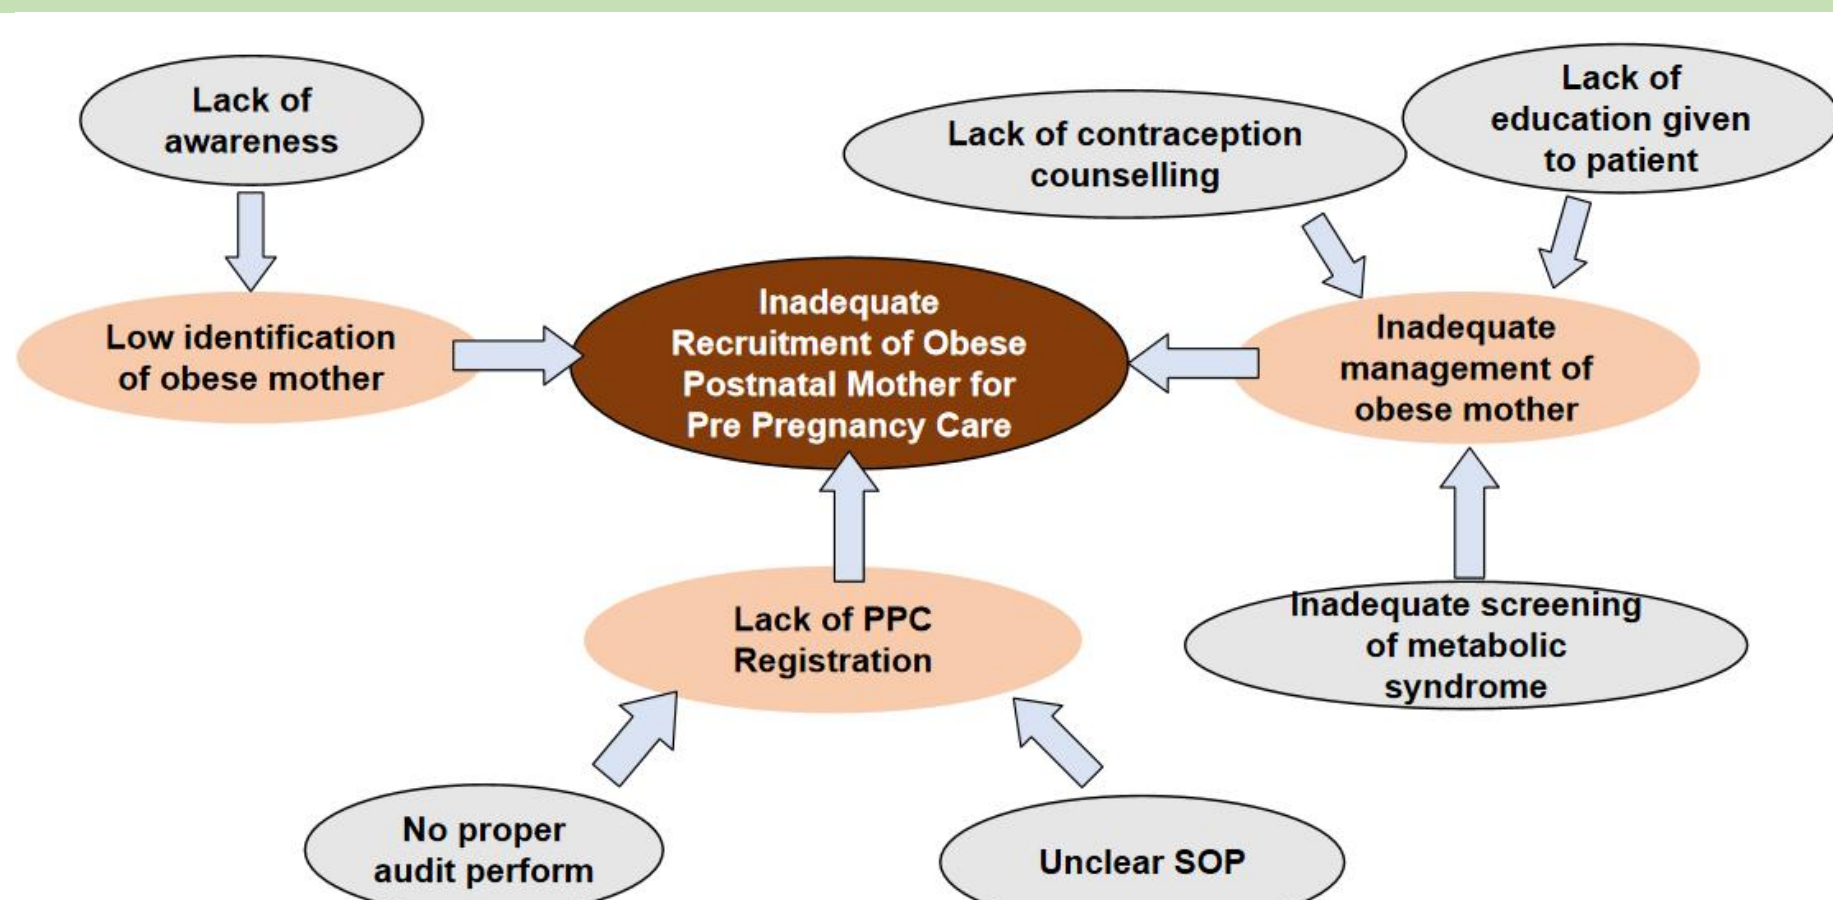

- National Health and Morbidity Survey (NHMS) revealed an **increasing trend** of obesity prevalence, from 13.4% (2015) to 18.3% (2019).
- Almost all pregnancy complications such as gestational hypertension, preeclampsia, gestational diabetes mellitus (GDM), large-for-gestational-age (LGA), congenital malformations occur **more frequently in obese women** than in women with a normal body mass index (Heslehurst et. al, 2008, Birdsall et. a, 2009, Stothard et. al, 2009).
- The time before and after childbirth is critical for intervening to delay or prevent obesity in women, support women's health during pregnancy, and reduce health risks for future generations. (Hollis et. al, 2017)

1.3 PROBLEM STATEMENT

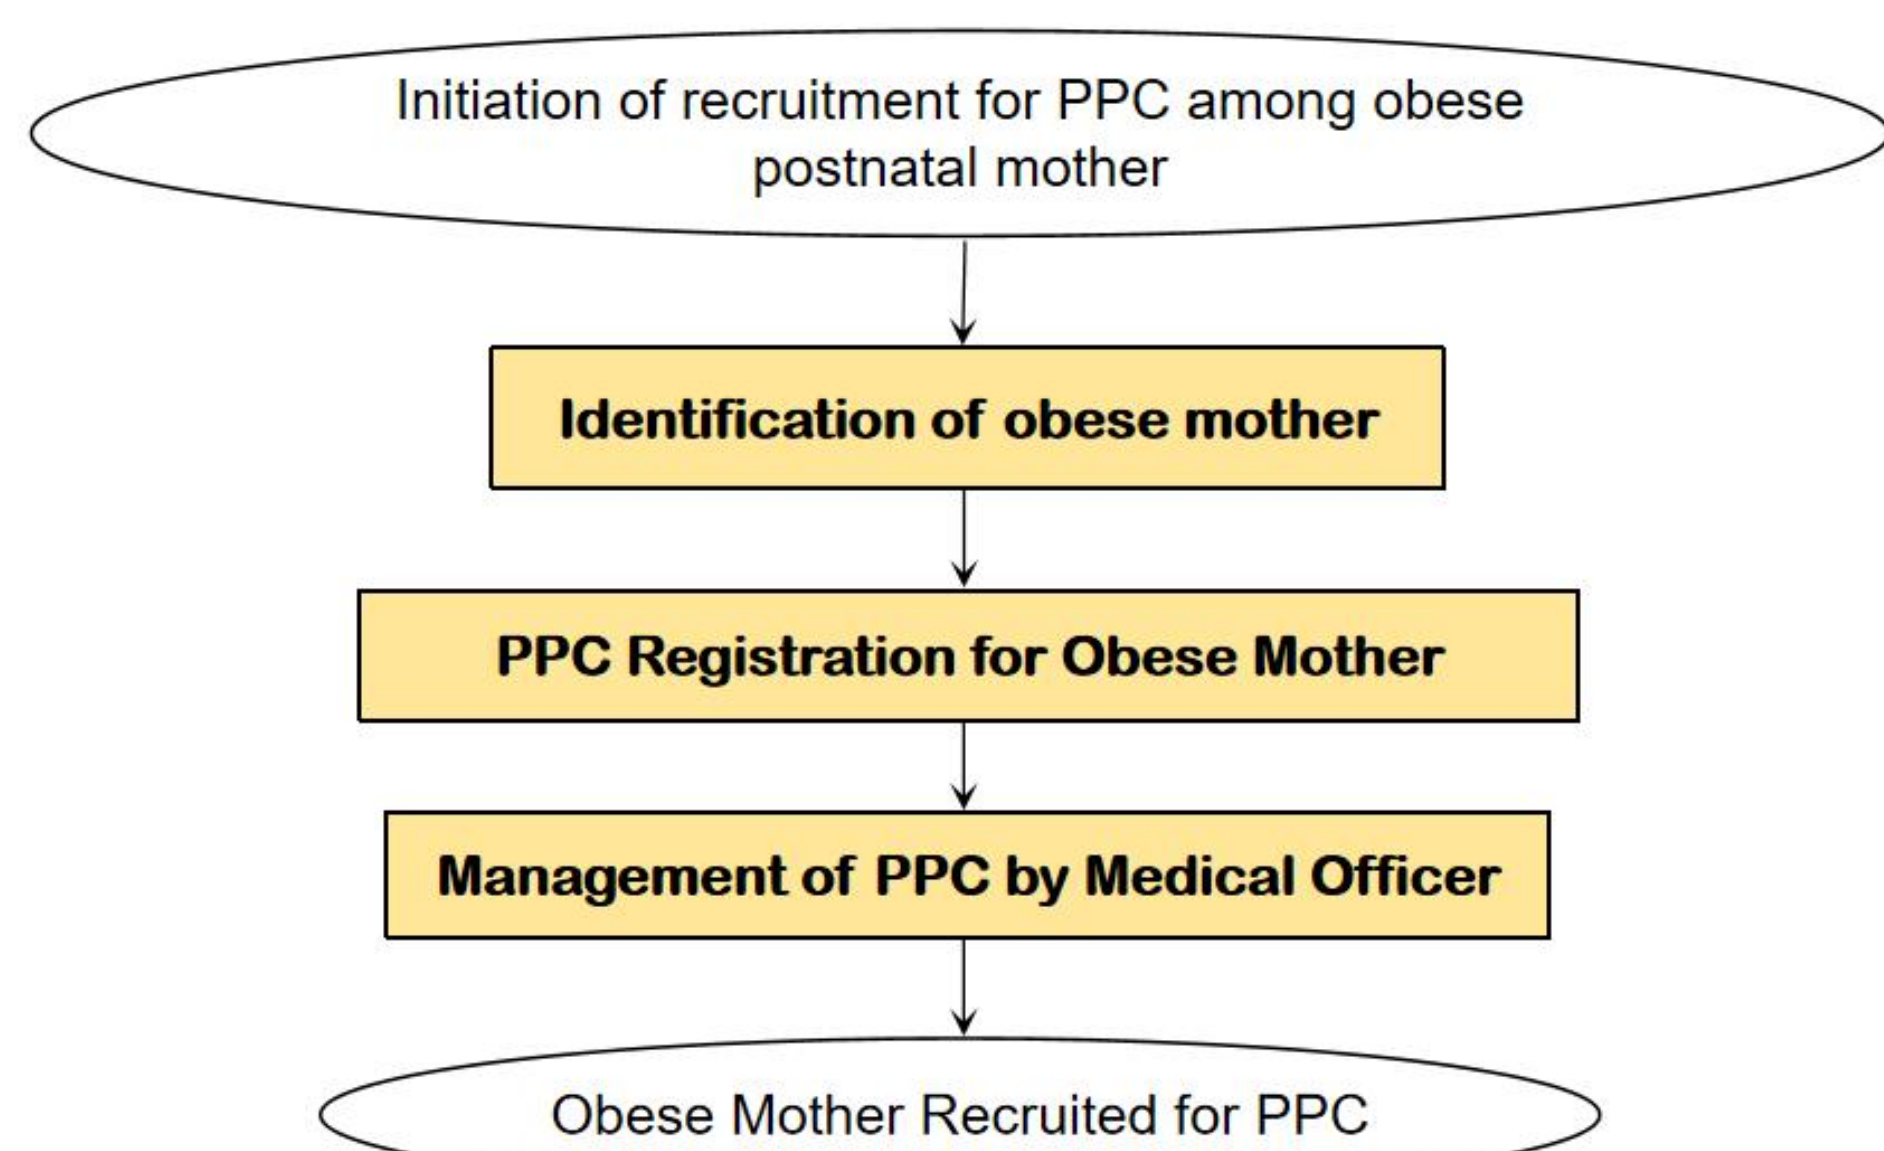

- There is inadequate recruitment of obese postnatal mothers for PPC in Barat Daya District.
- This may result in postpartum mothers not using proper contraception and the risk of metabolic syndrome going undetected.
- The low recruitment rate of obese postnatal mothers may be due to low awareness, non standardization of workflow and inadequate counselling.
- We hope to increase the recruitment of obese postnatal mothers for PPC in Barat Daya District.

2. KEY MEASURES FOR IMPROVEMENTS

2.1 CAUSE EFFECT ANALYSIS

2.2 PROCESS OF CARE

2.3 GENERAL AND SPECIFIC OBJECTIVE

General objective
To increase recruitment of obese postnatal mothers for pre-pregnancy care in Barat Daya District

- Specific objectives**
- To determine the recruitment rate of obese postnatal mothers for pre-pregnancy care in Barat Daya District.
 - To identify factors affecting the recruitment rate of obese postnatal mothers for pre-pregnancy care in Barat Daya District.
 - To formulate and implement remedial measures efficiently in improving the recruitment rate of obese postnatal mothers for pre-pregnancy care
 - To evaluate the effectiveness of remedial measures implemented.

2.4 INDICATOR AND STANDARDS

Indicator : Percentage of obese postnatal mother recruited for Pre Pregnancy Care (PPC)

$\frac{\text{Obese postnatal mother recruited for PPC}}{\text{Number of obese postnatal mother}} \times 100\%$

Standard : $\geq 80\%$ - based on consensus during QA PKDBD Meeting

2.5 MODEL OF GOOD CARE

| No | Process | Criteria | Standard | Pre Remedial | 1st Cycle | 2nd Cycle | 3rd Cycle |
|----|--------------------------------------|--|----------------------|-----------------|-----------------------|----------------------|---------------------|
| 1 | Identification of obese mother | MCH Nurses aware to identify obese postnatal mother by attaching PPC Form in the ANC book | 100% | 26.3% | 32.1% | 73.9% | 100% |
| 2 | PPC Registration for Obese Mother | 1. Medical Officer to make sure PPC form is filled up completely 2. Nurse incharge to register case into (PPC 101 Pind. 2019) | 100% 100% | 26.3% 26.3% | 28.6% 28.6% | 56.5% 56.5% | 100% 100% |
| 3 | Management of PPC by Medical Officer | 1. Counsel on mode of contraception 2. Educate on the lifestyle modification 3. Order screening for metabolic syndrome | 100% 100% 100% | 89.4% 0 0 | 89.3% 7.1% 3.5% | 100% 43.5% 26% | 100% 100% 84% |

3. PROCESS OF GATHERING

| METHODOLOGY | |
|---------------------------|---|
| Study Design | Cross - sectional |
| | Pre Remedial : March 2023 Remedial Measure 1 : April - June 2023 Post Cycle 1 : July 2023 |
| Duration of Study | Remedial Measure 2 : August - October 2023 Post Cycle 2 : November 2023 Remedial Measure 3 : December 2023 - February 2024 Post Cycle 3 : March 2024 |
| Sampling Method | Convenience sampling |
| Sampling Tools | Antenatal Book, Questionnaire to paramedic, Audit Checklist |
| Inclusion Criteria | - Postnatal 1 month mother with BMI $\geq 27.5 \text{ kg/m}^2$ at booking - Booking done at 1 st trimester <12weeks POA |
| Exclusion Criteria | Women who undergone Hysterectomy/Bilateral Tubal Ligation/Comorbidities prior to pregnancy/Transfer in/out case |

4. ANALYSIS AND INTERPRETATION

| | |
|----------------------|--|
| Shortfall in Quality | 73.7% obese postnatal mothers failed to be identified by nurses |
| | 73.7% cases were not registered into PPC |
| | 100% failed management of PPC by medical officers |

5. STRATEGIES FOR CHANGE

Cycle 1

- S1** : PPC course and briefing at district level
- S2** : Short infographic Video to increase awareness
- S3** : Reminder Tag

Cycle 2

- S1** : Dedicated team and focus group CME in each health clinic
- S2** : Revised PPC Form at district level
- S3** : KIT-OBE Education Tool

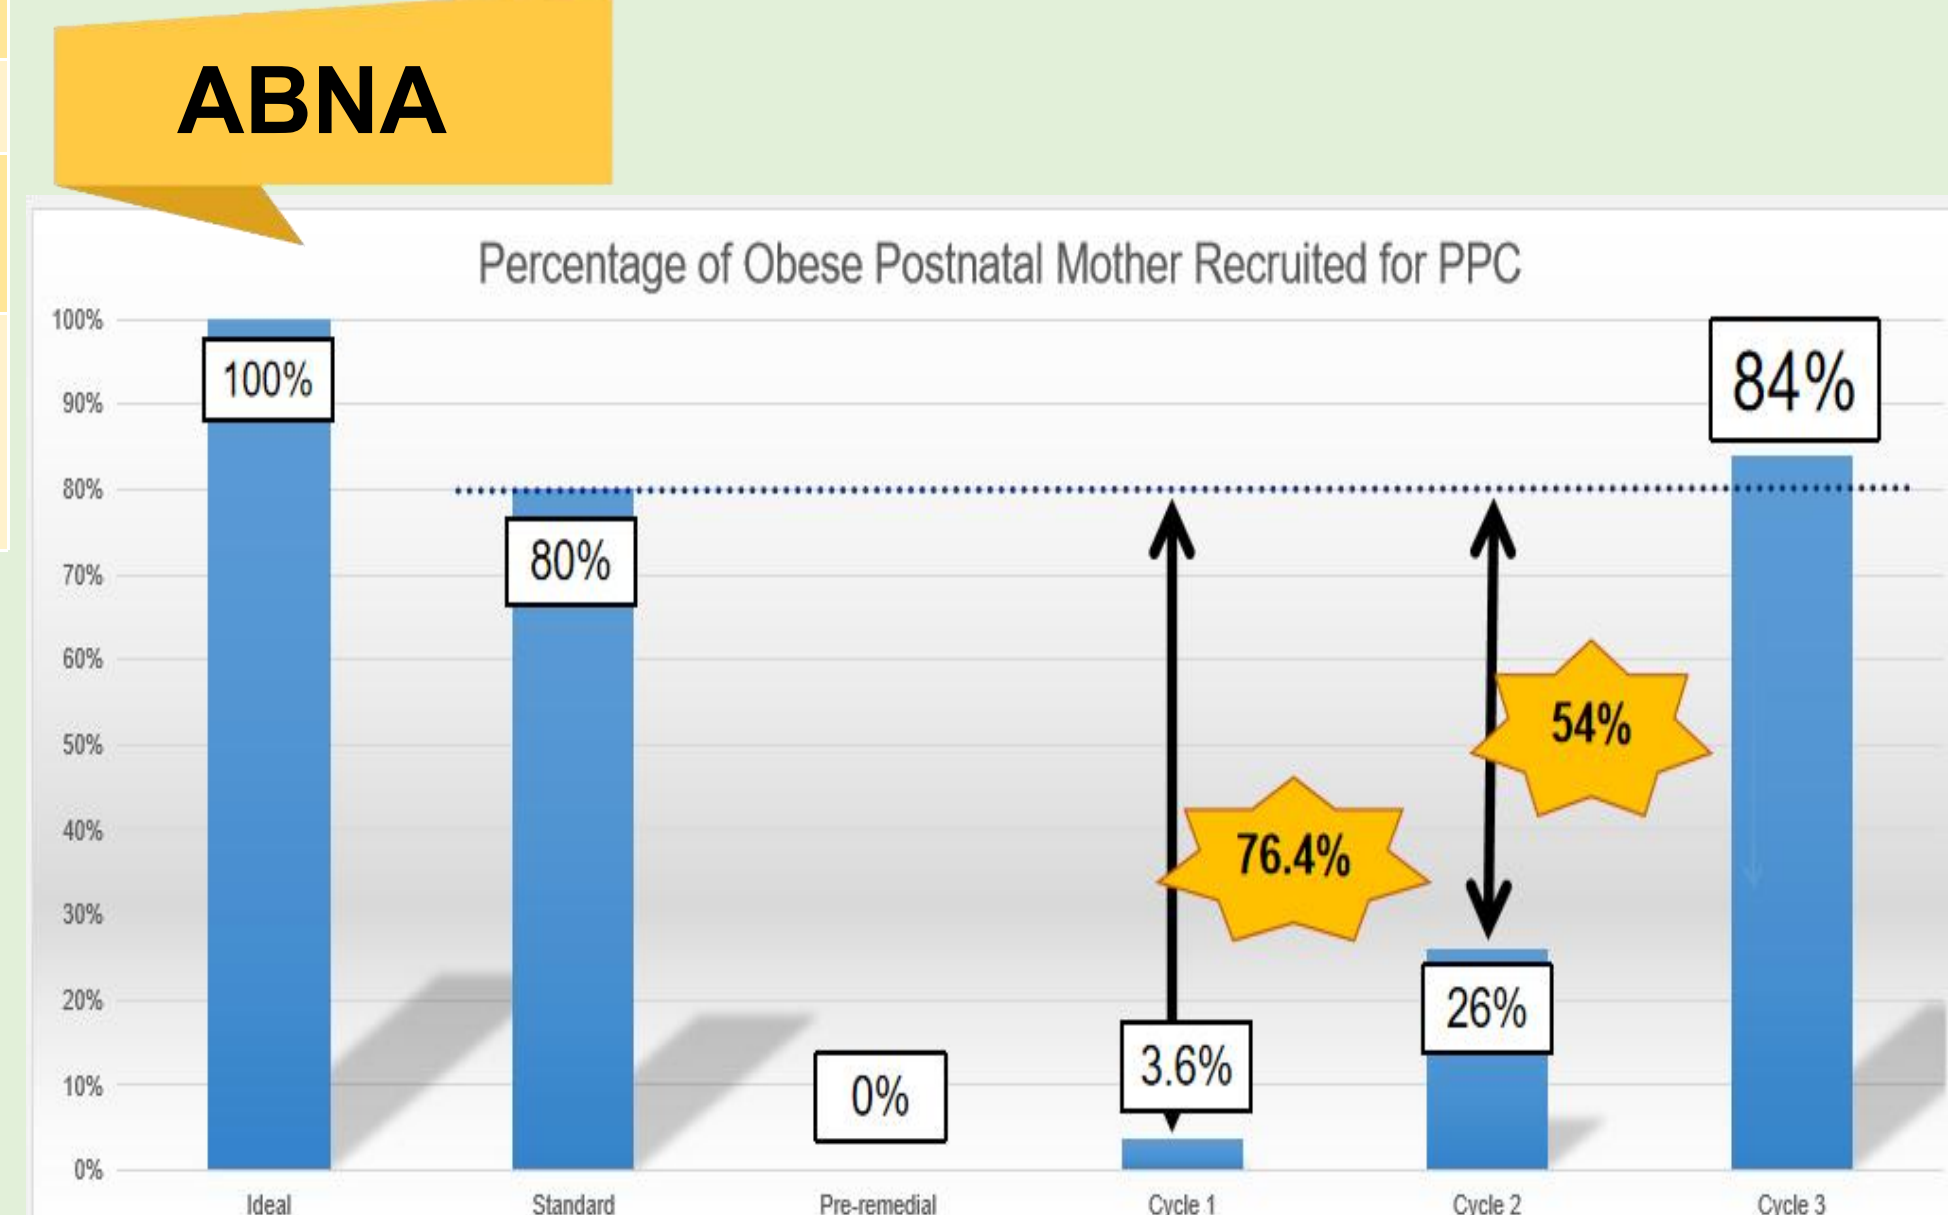

*adapted by JKN Pulau Pinang and implemented to all health clinics

Cycle 3

- S1** : PPC Alert Card on all tables
- S2** : PPC Alert Sticker on Antenatal Book

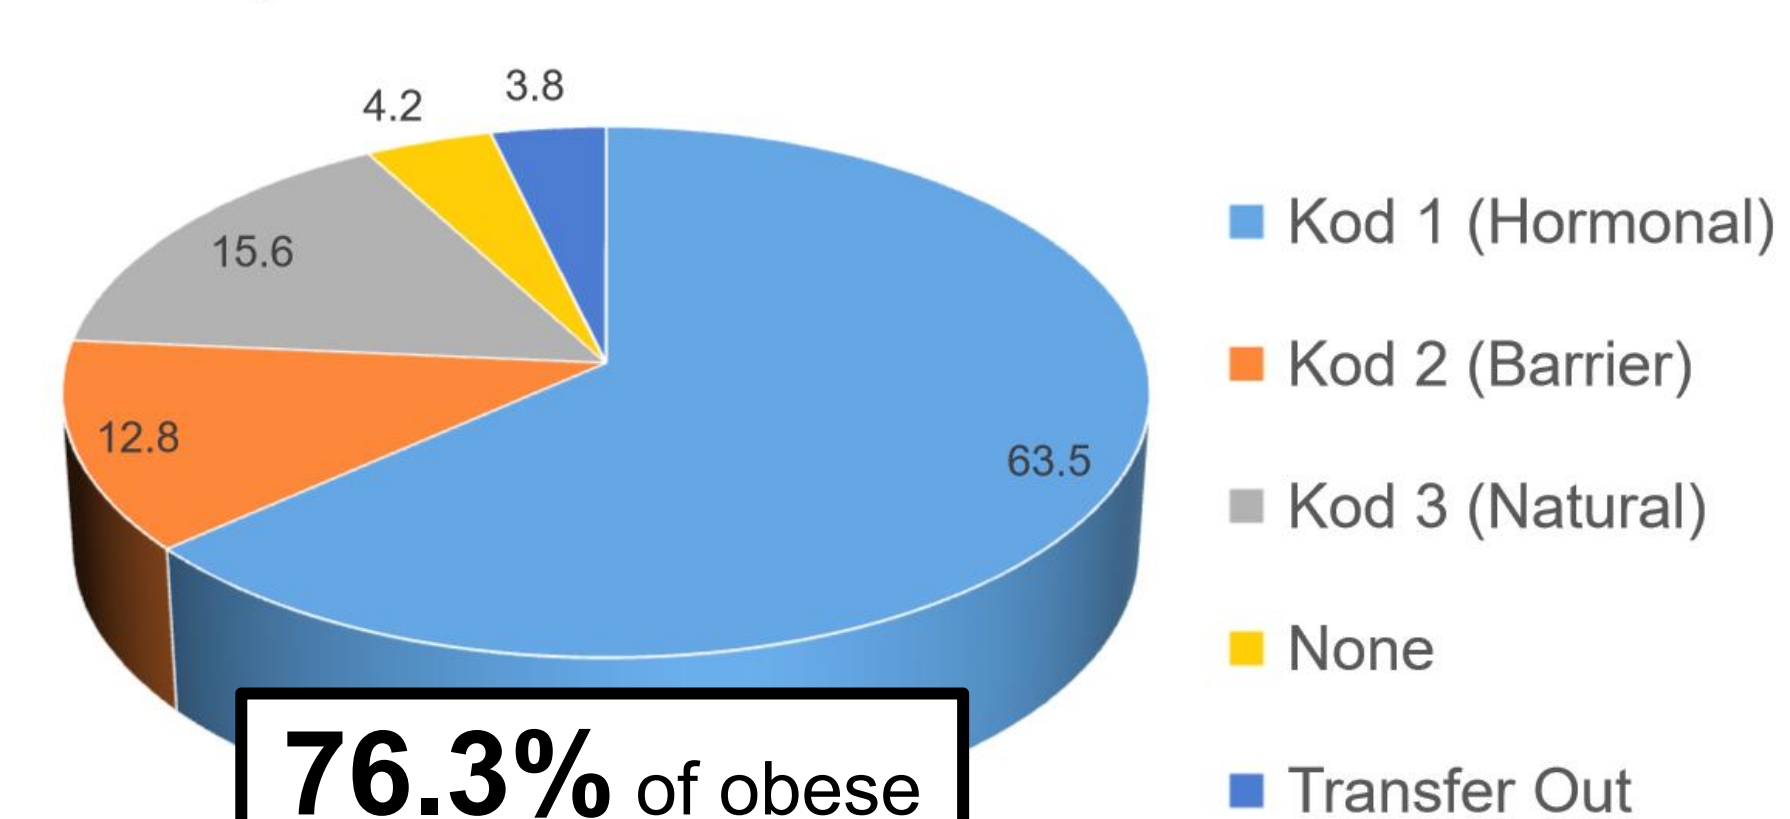

6. EFFECT OF CHANGE

| SIQ | Pre Remedial | 1st Cycle | 2nd Cycle | 3rd Cycle |
|--|--------------|-----------|-----------|-----------|
| Obese postnatal mother failed to be identified by nurses | 73.7% | 67.9% | 26.1% | 0% |
| Cases not registered into PPC | 73.7% | 71.4% | 43.5% | 0% |
| Failed management of PPC by medical officers | 100% | 96.5% | 74% | 16% |

7. IMPACT

Contraception Method of Obese Postnatal Mothers

76.3% of obese postnatal mother on contraception

Blood Result for Metabolic Screening

■ Normal ■ Abnormal

78% of mother has abnormal metabolic screening result

8. CONCLUSION

- The recruitment rate of obese postnatal mother for PPC in Barat Daya District improved from 0% to 84%.
- The possible factors affecting the recruitment rate of obese postnatal mother for PPC are **lack of awareness of staff on PPC for obese mother, non standardization of workflow and inadequate counselling.**
- The formulated remedial measures such as **PPC CME/Courses, KIT-OBE, revised PPC form, PPC Alert card and PPC Alert Sticker** have efficiently improved pre-pregnancy care among obese postnatal mothers.

9. THE NEXT STEP

- We aim to sustain our current outcome by consistently implementing the remedial actions.
- We are considering for collaboration with multidisciplinary teams for weight reduction program among obese postnatal mothers.

ACKNOWLEDGEMENT

Special thanks to our Pegawai Kesihatan Daerah Barat Daya, Dr Fazilah binti Mydin, all health care providers in Barat Daya District for support and contribution to this project.
